- New best Jordans for sale Release date

MW7 Shimano lock shoe design is to lock those often in bad weather is to lead the car to go out, for the people who do not mind the car in the rainy season. for the purpose of the function, compatible with the MW7 system of SPD using waterproof Gore-Tex material, with the rubber ankle covering design. Tension type shoe lace system, so that the coating comfort adjustment becomes very convenient and fast. The devil felt in front of the ankle more to strengthen the ankle covered. The entire structure of the shoe is carried in a waterproof shield bottom, the entire devil felt and lace up the body, and further all things fixed. MW7 Shimano details GoreTex waterproof material - flannel insole- speed lacing system tighteningSPD / compatible size: 38-48weight: 538 g (size 45 single foot) market price: \$250 a waterproof shield will lace the body with the ankle devil felt completely coated. so careful design, water or mud is difficult to enter this pair of shoes. lock piece has a large adjustment space, around the rubber soles to provide walking grip. ankle with the same material as the diving suit of the rubber to prevent water droplets from entering. The actual performance of I live in winter usually have a lot of rain, and occasional snow, the temperature often hovering between zero and ten degrees celsius. Before I was used to wearing thick socks in this weather, ready to meet the inevitable will be the entire pair of shoes and feet are wet. But after testing the MW7, I'm not sure if I will continue to use the old methods of their own. A complete trip and found a foot or both dry and warm, it is very difficult to put down. < p > even in the wet riding conditions is the kind of line on the depth of the pool to the ankle, sky is raining, I went back home and still have double dry foot, water is not from the ankle part flow down. This is the biggest effect of the ankle covering of the rubber, which prevents the water from flowing into the shoe. Mw7 size fits, but if you are planning to temperature in the region below the freezing point of riding to into the thick socks, it may be slightly larger point size should be considered. In the freezing temperature around riding, foot or feel warm, but at ten degrees Celsius under riding, also won't feel too hot. But if you're going to go cycling in the Arctic, perhaps even more insulated shoes than MW7 would be a better choice. MW7's hardness Center - it's not as hard as XC shoes, but no matter how long I rode, it always gave me enough support to keep up.
